going the extra mile

Contents

Dedicated to serving the Aftermarket

If you need it - we produce it.

No one goes the extra mile to bring you exhaust and emission products like Dinex Emission Inc. Dinex is the global market leader in development, production and sales of exhaust spare parts for trucks, light duty trucks and buses. Dinex is a recognized quality brand amongst distributors and OE manufacturers with more than 5000 distributors around the world. With an already established market in Europe and Asia, Dinex recently introduced new spare parts program in the US becoming the first supplier to service a global market for spare parts for the heavy duty industry.

Dinex produces:

Insulated Components

Mainly used in systems with emission regulations.

Flex pipes & bellows

Well known Z-S flex pipes are in production. In addition, we have developed a low-leakage flex hose & bellows for emission applications.

Pipes

Bending from 1.5" to 6" inches in aluminized or stainless steel.

Emission technologies

DPF, DOC & SCR cats can be installed into our muffler systems.

Mufflers

Lock seamed, stamped or welded units. We supply aluminized or stainless steel in 125 different sizes today with our own tooling shop.

Clamps

The portfolio includes Flat clamps, DIN clamps, V-clamps, Flex clamps and U-clamps.

Exhaust fittings

All fittings are made inhouse for complete systems supply. Full range of straps, heat-shields and other fittings available.

The Dinex Group

Dinex was founded in 1982 employing 15 people in one production, sales and distribution facility. Today the Dinex Group, with its headquarters in Denmark, operates through 20 companies and employs over 1300 employees worldwide with production plants in Denmark, UK, Germany, Latvia, Finland, USA, Turkey, Russia, and China. Dinex Group is a leading global manufacturer and distributor of innovative engineered exhaust and emission control products and solutions for the heavy duty diesel engine and vehicle industry. The constantly growing portfolio of more than 15,000 part numbers and complete systems represents everything from pipes, mufflers, clamps, flexible pipes, insulations and after treatment products like SCRs, DOCs and DPFs.

Dinex is the only manufacturer worldwide of exhaust and emission products that has its own technology and production platforms of emission substrates and coating facilities. Dinex Technology Center - our innovative R&D Center - was completed in 2007 and is state of the art for advanced development and system integration of complete solutions for the industry.

Dinex produces more than 95% of all material for its complete exhaust systems - from turbo to tailpipe - including advanced emission technologies.

EPA 10 system

Vision

The vision of the Dinex Group is to become the worlds leading manufacturer of complete exhaust and emission systems for the off-road and on-road markets for diesel engines.

This includes continuous improvement of existing filter medias in conjunction with catalytic wash coating (CDPF's) and various options for active regeneration (AR).

In addition to this, effective methods for reducing nitrogen oxides (NOx) by selective catalytic reduction (SCR) and reliable, cost effective exhaust control and monitoring systems to ensure optimal functionality, compliance and integration with On-Board-Diagnostics (OBD).

As an extension of the above, Dinex is developing combination systems, so-called SCRF where both PM - reduction (DPF) and NOx - reduction (SCR) is being dealt with in one single filter unit using dual washcoat technology.

Dinex Inhouse R&D

Dinex Emission Technology department will facilitate the Dinex vision by inhouse research and development as well as cooperating with the best technology providers in the world to identify, test and validate the best available technology for future emission control to be applied for diesel engines serving the off-road and on-road market segments.

Know-How

Product Development

More than 100 R&D employees work on developments of exhaust and emission control systems in house. This includes all stages from design, 3-D drawings, flow dynamics and testing at Dinex' Test Lab for noise, back pressure and emissions of prototype designs.

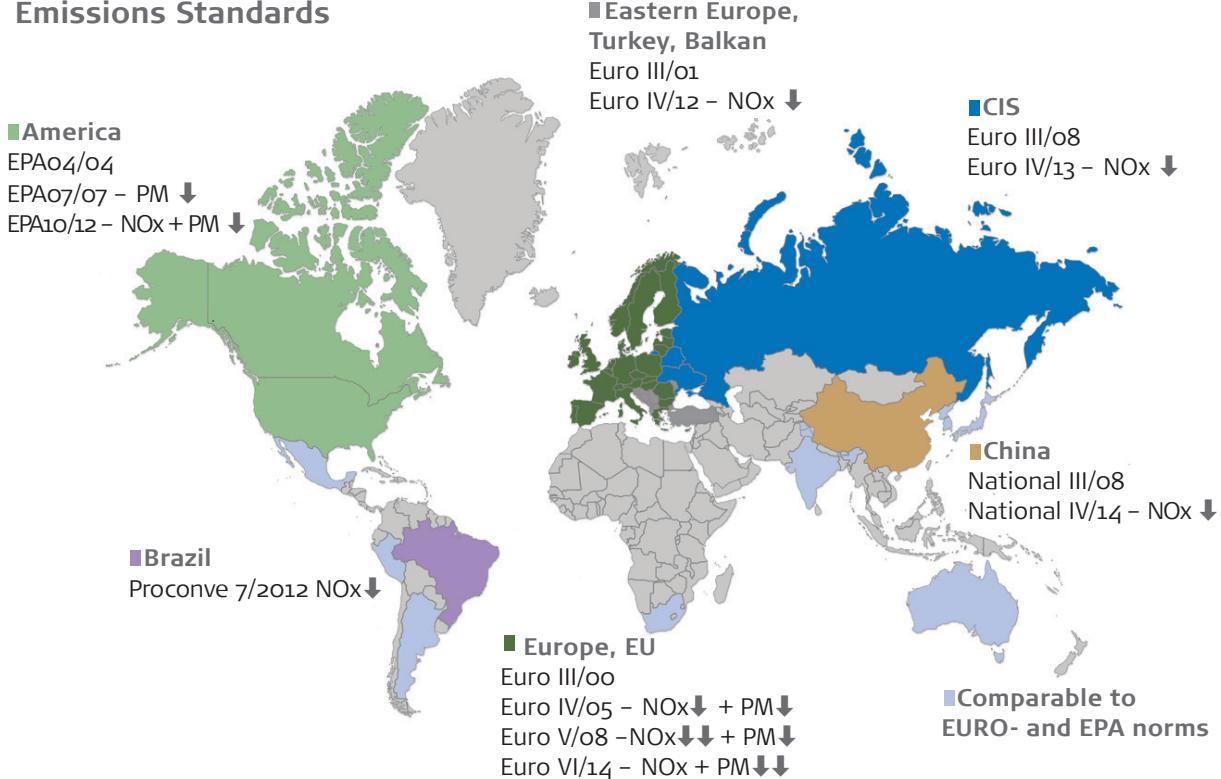

Design

Dinex uses SolidWorks - a 3D CAD system program, which is a major advantage when communicating with customers as exchanging 3D models and drawings etc. is simplified.

2D Drawings

- Portable Document Format (PDF)
- 2D DXF/DWG (.DXF, .DWG)
- TIF image (.TIF)

Heavy Duty Emissions Standards

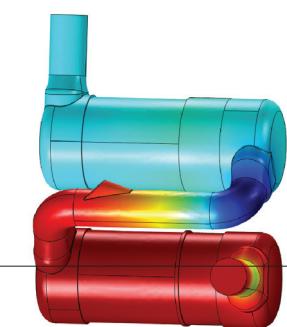

3D Models/Assembly

- STEP AP203/214
- Initial Graphics Exchange Specification (.IGS)
- Pro/ENGINEER files (.PRT, .ASM, .XPR, .XAS)

In the development phase different methods of calculation are applied, based on theoretical values and experience, as well as information supplied by customers, such as:

- Engine type
- Engine power
- Exhaust temperature
- Exhaust flow
- Space envelope available

Calculations are supported by a CFD analysis using a Comsol Multiphysics system program, which verifies the design of mufflers. All new designs are tested to ensure theory and real-life always matches up.

Dinex Technology Center

Test and Documentation

The in-house test center includes a range of engine test benches making it possible to test and document muffler functionality with regards to sound attenuation and back pressure. Sound levels are measured in 1/3-octave frequency intervals from 50 Hz to 8 kHz. All tests are carried out according to Dinex standard testing methods or alternatively to customer requirements.

The test center is used as a design tool for R&D purposes, for documentation and quality control. The state-of-art Test Center can also hold full customer vehicles or engines and test and validate products.

Technology and R&D Center

Dinex has installed in excess of 50,000 filter systems in Europe and gained huge experience in emission control installations. In line with the new EPA o7 and EPA 10 regulations, Dinex has established Dinex Emission Technology Center to ensure the required competences within the Group.

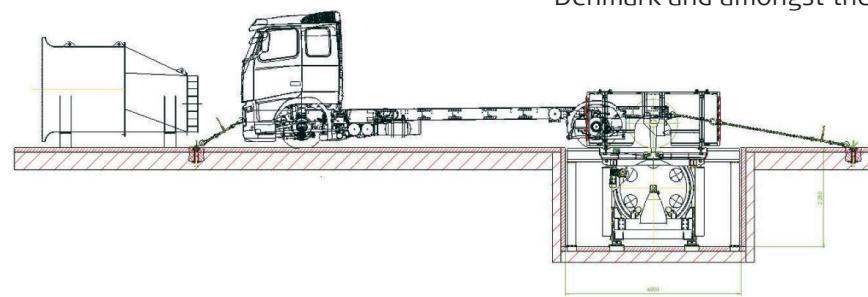

The Dinex Technology Center enables Dinex to develop, test and validate mufflers and emission technologies much faster, with greater flexibility and accuracy, and in great detail.

The benefit for our customers is an even more professional and scientific approach, resulting in a higher level of development, verification and documentation that will allow Dinex to work with customers to meet tomorrow's challenges for exhaust and emission systems, not least upcoming requirements for EPAo7 & EPA10 replacement mufflers.

The Dinex Technology Center covers 1,400 m² and includes a 900 m³ - reverberant sound chamber with Brüel & Kjær measurement equipment for even more detailed analysis of noise and vibrations. In addition, the Technology Center includes two Horiba engine dyno's for engines up to 600 kW and a chassis dyno for vehicles up to 18 m and 600 kW, as well as a hot shaker bench with up to as much as 440 lbs shaking capacity.

Furthermore, Dinex has installed a new flexible FTIR analyser for measuring exhaust gas and air pollution components. Size distribution and part number ultrasizing facilities are also integrated.

The Technology Center includes facilities for development of new technologies and design, fitting, testing, vibration and verification of prototype systems. The Dinex Technology Center is one of the most modern engine laboratories in Denmark and amongst the best the world.

Quality in Each Detail

Mufflers

Lock seamed, stamped or welded units. We supply aluminized or stainless steel in 125 different sizes today in our own tooling shop.

Insulation Techniques

Keeping heat inside or outside. 1500°F inside and 500°F outside

Clamps

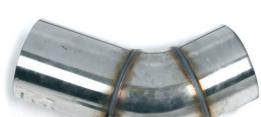

A complete range of low-leakage clamps.

Pipe Bending

Dinex prefers to bend all pipes and to minimize the use of welding. Competences includes 1D-bending (1 x diameter), and zero distance between bends (bend-in-bend).

Dinex

Competitor

Flexible Parts

Dinex uses 2S, 3S and bellow design to comply with leakage requirements

Interior Assembly

Dinex welds all internal parts minimum of 50% to resist breaking.

Material Selection

Dinex uses alu-zinc or stainless steel material, depending on the application, to achieve maximum lifetime for pipes and mufflers.

Exhaust fittings

All fittings are made in-house for a complete systems supply.

Exact Interior design

Dinex ensures correct interior design to guarantee best flow and noise reduction.

System Compliance

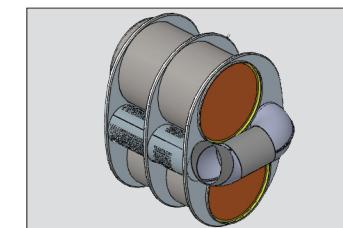

Despite stringent emission reduction requirements on new trucks, there are not yet any regulations for the supply of emission mufflers as spare parts for EPA07 or EPA10 heavy duty vehicles. Regardless, whether a replacement emission mufflers is being delivered from the vehicle manufacturer (OES) or the independent aftermarket (AEM), a verification should be mandatory, and Dinex is pushing for legislative regulations of this market.

The following parameters should be considered as a minimum:

Emission compliance

An efficient coating - regardless whether it is for PM or NOx reduction, it is mandatory for the optimum performance and compliance with both engine calibration and given emission levels.

Back pressure

The right design of mufflers and substrates ensuring the correct, low back pressure shall ensure no deterioration of the engine as well as a low fuel consumption.

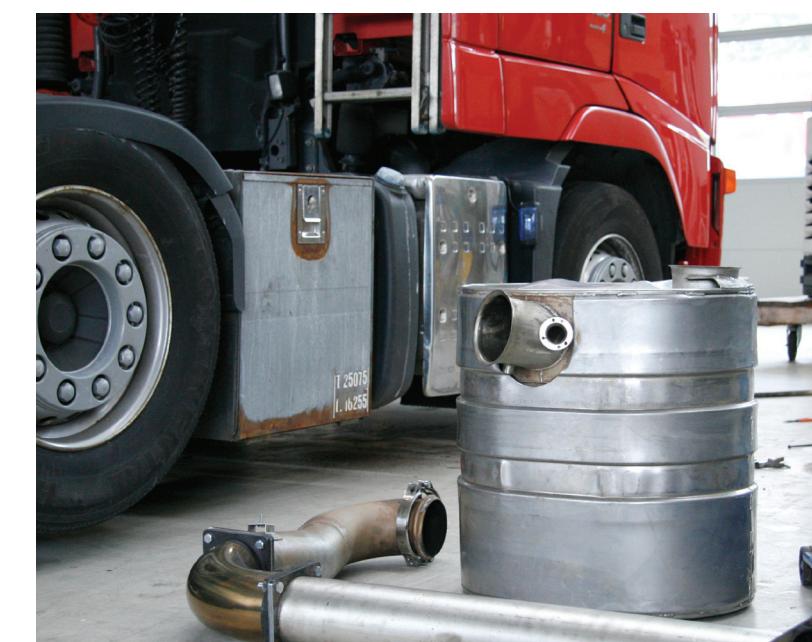

Noise reduction

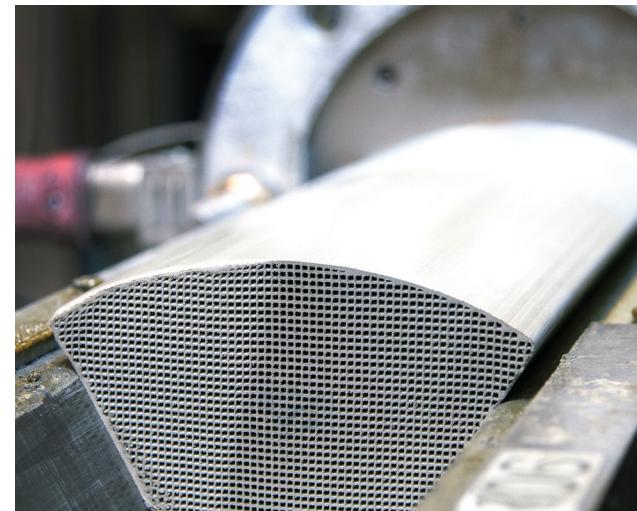

The sufficient noise reduction must be achieved in a given space envelope to ensure meeting all international noise standards.

Dinex tests and validates all designs of emission mufflers prior to launch.

We keep all data for both Dinex and OE mufflers - this includes new mufflers as well as aged mufflers with several hundred thousands miles in order to benchmark the deterioration and effect on performance over time.

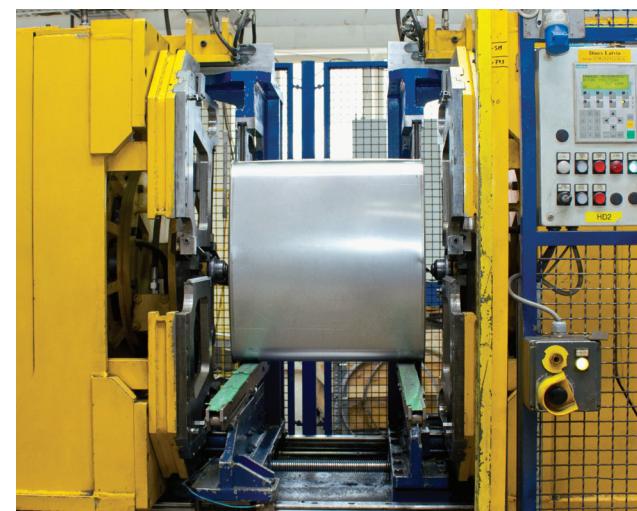

Your complete supplier for exhaust systems

With our new facility in the US, Dinex can now serve your needs for aftermarket replacement parts. Our company has been serving the aftermarket industry for over 30 years with a full range of parts for trucks, buses and light duty vehicles. Our state of the art facility in Dublin, Georgia is no different.

Our facility's capabilities include:

- Muffler production
- DPF and SCR canning
- Filter Coating
- Pipe bending 1.5"-6"
- Pipe Insulation
- Flex Manufacturing
- Pipe Manipulation
- Skilled workforce trained to perform according to quality approvals of ISO9001 / TS16949

At Dinex

Quality is an attitude

Commercial vehicles often operate around the clock and that requires nothing but the best from the components used. Dinex' advanced production methods ensure high levels of repeatable quality output.

Certified to top standards

Dinex holds a number of certifications, amongst which ISO 9001, 14001 and TS16949 are the most prominent.

Own core technologies

In-house production of ceramics / metallics, coatings, as well as metal forming, ensure that all key processes are within Dinex' own control.

Optimized processes

Design for durability forces high demands on production processes to reduce the use of weldings and joints to increase the lifetime of the products.

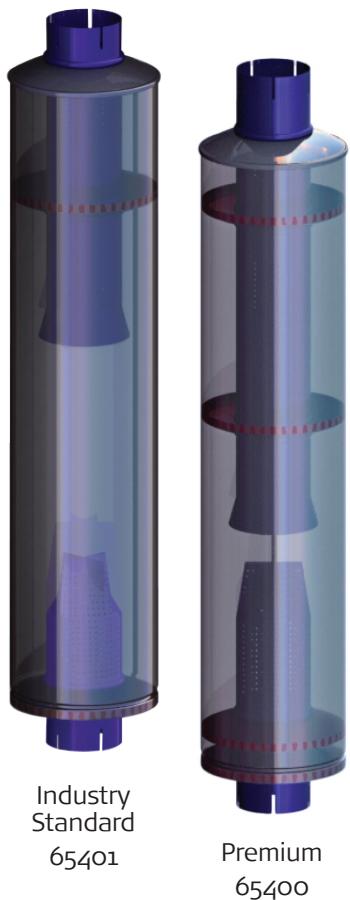

Dinex Weld-free Mufflers

Dinex introduces the industry's first external "weld free" muffler, a common advantage in Europe is now available in the US.

Dinex uses lock-seaming manufacturing processes that reduce the use of weldings and joints in order to increase the lifetime of the products.

A variety of muffler dimensions are available, and all mufflers are designed to optimize sound attenuation and backpressure.

Most common Dinex mufflers are all the weld-free design, but contact Dinex for specific listing/overview of our complete offering.

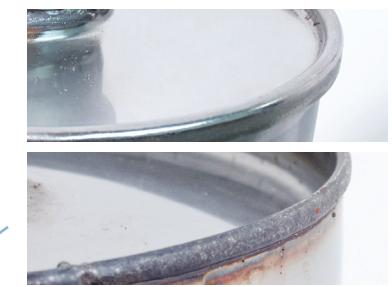

Dinex premium mufflers will meet the most demanding customer expectations in regard to quality and performance giving significantly lower back pressure and improved fuel consumption, while Dinex Economy mufflers will offer a cost optimized design with suitable quality and performance.

It doesn't matter which version you choose, because we only use the best materials in the market and our know-how to deliver the product that matches your needs.

Dinex Premium & Dinex Industry Standard Mufflers

Benefits on an external weld-free design:

- Significantly lower back pressure
- Improved fuel consumption
- Better visual quality
- Better design
- Durability
- Higher corrosion resistance
- Stronger construction against breakage due to no welds and lack of material heat treatment.

Stronger closing of the lockseam

Long seam design versus welding prevents rusting

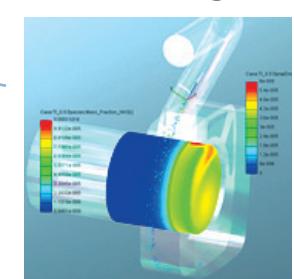

Lockseaming versus welding prevents rusting

Same material thickness of 1.25 mm for both premium and industry standard version

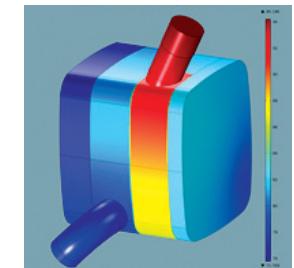

Stronger construction against breaking

New design for optimized cost and extended durability

CFD

- Flow uniformity index
- Flow distribution
- Backpressure

Acoustics

- Transfer matrix
- Transmission loss
- Insertion loss

Available Flexible Solutions from Dinex

Exhaust hose,
Type D2S

Well-known industry standard for EPA 04 design systems. Offered in SS or ALU materials, depending on system requirements.

Exhaust hose,
Type D2S+

Improved hose as an alternative to current D2S type. D2S+ type offers enhanced profile geometry, lower leakage rate and better flexibility compared to D2S type.

Exhaust hose,
Type D3S

Improved torsional movement due to round cross-section. Improved gas-tightness due to changed profile with inside scale. Further improved durability due to better contribution of friction.

Bellow type

Strip-wound interlocked hose with thermal and acoustic insulation.

Bellow: damping properties, high flexibility without building up stress, limited absorption of installation tolerances, AdBlue (DEF, Diesel Exhaust fluid) and HC-tight concept, Air-gap insulation, Strip wound inliner for exhaust gas deflection.

We offer all well known bellow types, also with / or without inside braid.

Flexible Hose Solutions

A flexible hose absorbs fatiguing vibrations between the engine and the exhaust system. Dinex in-house production supplies hoses for all ranges of applications within exhaust technology - whatever requirements for leakage rates and grade of flexibility and expansion. The machine operates with a minimum of manual intervention, and supports pipe diameters from 1.5" (38mm) up to 6" (152.4 mm) in several types of material.

Dinex uses and integrates the highest quality of interlock flex pipes available on the market in D2S, D2S+ and D3S design.

Flexible pipes are supplied in various dimensions as an integrated part of an exhaust pipe or as a separate unit that can be connected with clamps

Technical Specification for Exhaust Hoses

Hose Type	Type D2S - Round Double interlocked profile	Type D2S+ - Round Double interlocked profile	Type D3S Double interlocked profile with additional inside layer
Specification			
Leakage Rate	15,0 l min ⁻¹ dm ⁻² @0,15 bar	9,0 l min ⁻¹ dm ⁻² @0,30 bar	2,0 l min ⁻¹ dm ⁻² @0,30 bar
Flexibility / Force	60 - 300 N (+/- 15 mm from mid position)	60 - 250 N (+/- 23 mm from mid position)	60 - 250 N (+/- 23 mm from mid position)
Axial Extension	> = 20% (> = 60 mm)	> = 30% (> = 90 mm)	> = 30% (> = 90 mm)
Maximum Torsion	2° (@ compressed lenght of 300 mm)	5° (@ compressed lenght of 300 mm)	5° (@ compressed lenght of 300 mm)

Pipe bending

Pipe Bending

Dinex prefers to bend all pipes and to minimize the use of welding. Competences includes 1D-bending (1 x diameter), and zero distance between bends (bend-in-bend or compound tooling).

Material Selection

Dinex uses mild steel, alu-zinc, stainless steel, and chrome material, depending on the application, to achieve maximum lifetime for pipes. For a complete list of sizes and materials available for stack pipes, reference page 85 of our universal section.

Dimensions up to 6"

Dinex manipulates pipe work ranging from 1.5" to 6".

Different dimensions, various Centerline Radius sizes (CLR), wall thickness and material specifications are available.

Bending without deformation

Bending technologies utilized within Dinex ensure that all pipes are bent without deformation.

New boosting technology also gives minimum centerline radius all the way down to one time the diameter (1-D), meaning also reduced clamping marks and deformation on the pipe surface.

All bending processes are Computerized Numerically Controlled (CNC) to ensure optimal repeatability and quality control.

Clamps

Our premium clamps are strong, reliable yet lightweight and flexible. No one else offers you the choices we do.

Dinex' high quality clamps offer you a perfect fit and seal on any exhaust installation. From very simple and cost effective design solutions, to the highest class of products serving the most demanding installations. We offer you the standard you are accustomed to but we take it one step further to give you our Dinex high quality premium clamps with superior benefits.

Looped ends make it possible to have a greater adjustment range and guaranteed band tension preventing the ends from closing up against each other. Customers can request either well known & cost effective ALU plated, durable ALU nickel plated or stainless steel fasteners for their applications. Clamps are designed to form around the shape of the pipes, with fasteners working independently to provide maximum deformation hence a better fit.

Dinex offers a wide range of products to connect and fit exhaust components. The portfolio includes flat band clamps, DIN Clamps, V-clamps, Flex clamps, U clamps, tightfit and many other types, made from aluminized steel or stainless steel.

Industry Standard

- Straight bridge piece
- Step incomplete
- Reaction block
- restricts adjustment
- Bespoke bolts
- Larger fasteners
- ALU plated fasteners
- No joints

Dinex Premium

- Stepped tongue
- Formed 360° step
- Greater adjustment range
- Standard bolts
- Compact mechanism
- Fasteners can resist 700 hrs salt spray
- Clinched joints

Understanding Emission

What happens when the emissions from the engine flow through the exhaust system? What characterizes the different emissions and how can they be cleaned? Below you find an overview illustration with explanations.

Nitrogen Oxides (NOx)

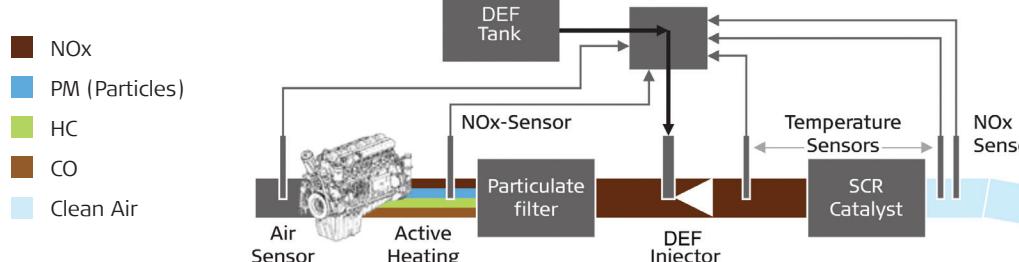

- Nitrogen oxides consist of NO & NO₂ are created in connection with the air intake and convert into nitrate.
- Very poisonous for people and leads to smog formation.
- Often difficult to reduce but this can be achieved with the use of SCR systems.

Particles (PM)

- Smog formation
- PM is causing cancer
- Organic/inorganic. Very unhealthy for people
- Can be reduced by a particulate filter (DPF) system, either DiPEX® (cordierite filter), DiSiC® (silicon carbide filter) or DiDOC+® (open partial filter)

Hydrocarbon (HC)

- Poisonous, carcinogenic, smog formation
- Can be oxidized by a precious metal catalyst
- Converts into CO₂ and water
- Can be reduced by a particulate filter (DPF) system, either DiPEX® (cordierite filter), DiSiC® (silicon carbide filter) or DiDOC+® (open partial filter)

Carbon Monoxide (CO)

- Acutely poisonous
- Can be oxidized by a precious metal catalyst
- Converts into CO₂
- Can be reduced by a particulate filter (DPF) system

Dinex Active Regeneration (AR) System

An extra burner system providing higher temperature in the exhaust stream. This ensures that the Dinex particulate filter can always clean the particles, even if you have low temperatures in the exhaust due to the driving conditions of the vehicle.

Dinex Particulate Filter (DPF)

Cleans the exhaust gas up to 99% of PM, CO and HC. The filter is a ceramic unit coated with either platinum or another coating formula or Diesel oxidation catalyst (DOC).

Dinex SCR Catalyst

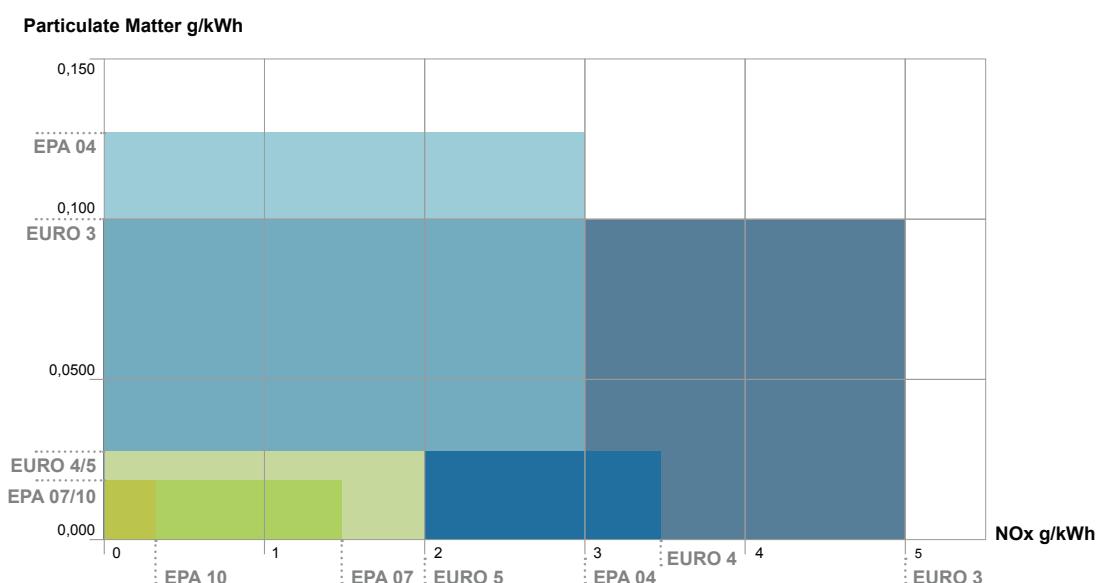

Cleans the exhaust gas of NOx up to 80%. The SCR catalyst is a ceramic coated unit. For the SCR to work it is necessary to inject DEF (Diesel Exhaust Fluid) into the exhaust stream by using a pump, nozzle and control system.

Emission technologies for EPA07 and EPA10 systems

With more than 10 years of experience, Dinex has installed more than 30,000 DPF systems around the world. Dinex is the only manufacturer in the World that develops and produces coatings and ceramic / metallic substrates for creation of particulate filters in-house - along with all the vehicle specific metalwork to complete vehicle specific emission control applications. Dinex has an intensive knowledge and understanding - from development to integration - within diesel emission solutions.

Our Aftermarket Particulate Filters give you:

- Direct Fit to OEM version
- Meet OEM specifications
- Stainless Steel construction
- substrates supplied as both closed and open units for either DPF or SCR and DOC functionality
- Wide range of products for all makes and models

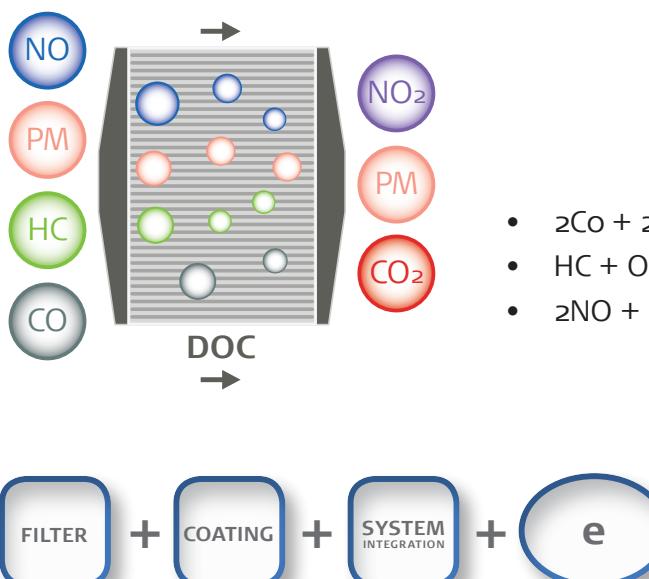

DOCs

Diesel oxidation catalysts (DOC) are open filters, that oxidize $\text{CO} \rightarrow \text{CO}_2$; $\text{HC} \rightarrow \text{CO}_2 + \text{H}_2\text{O}$, $\text{NO} \rightarrow \text{NO}_2$.

CO_2 (Carbon Dioxide) and H_2O (water / vapor) are harmless gases in the nature, but NO_2 (Nitrogen Dioxide) is a poisonous gas, but is needed to ensure right Diesel Particle Filter (DPF) regeneration. Also a very important feature for DOC is that it generates heat, so exhaust gases are warmer after DOC than before. This as well is a very important point for well functioning exhaust system with DOC and DPF, because DPF needs certain temperature to ensure regeneration. All this means that right amount of coating of precious metals (Pt; Pd etc.) is mandatory to ensure proper function of complete exhaust system - the most important features are substrate material, coating, CPSI (channels per square inch).

Dinex uses both metallic and ceramic substrates.

All made inhouse by Dinex and all needed homologations obtained.

DPFs

Diesel particle filters (DPF) are closed filters, that remove diesel particulate mass (PM) & particulate number (PN); also known as a soot from the exhaust gases. Diesel particle filters, in most cases, works in strong connection with oxidation catalyst. Usually the regeneration process is controlled by ECU (engine control unit), which measures back - pressure to get the right data for regeneration. Regeneration is ensured by an exhaust temperature of around $570^\circ - 750^\circ\text{F}$ degrees. Similar to diesel oxidation catalysts, also for DPF it is of high importance, what substrate material is used, amount of precious metal coating, CPSI etc. All these factors mentioned above has a high influence to back-pressure, regeneration algorithm etc.

Retrofit

Fitting a DPF emission control system to your vehicle to meet legislation requirements can be difficult, but Dinex has developed a concept meeting every phase of your challenge. Dinex has introduced technologies that offer a solution to any kind of vehicle and driving cycle.

Dinex has an extensive portfolio of solutions for all vehicles. Designs are made to be 1:1 interchangeable with the old muffler making the fitment cost tremendously reduced compared to most other available systems.

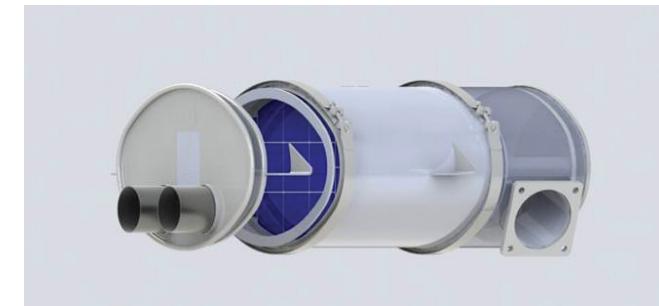

Using this concept also allows you to retain the original pipe work design - allowing competitive spare parts also in 5-10 years, ensuring no-one gets unpleasant surprises with regard to maintenance costs over the duration of the product lifetime.

DiNLOG® monitoring: Each Dinex filter is installed with a DiNLOG® LED monitoring device ensuring on-going monitoring of filter load condition for optimum engine performance. In addition hereto the DiNLOG® ECU holds a significant amount of data ensuring professional service and advice on filter operation.

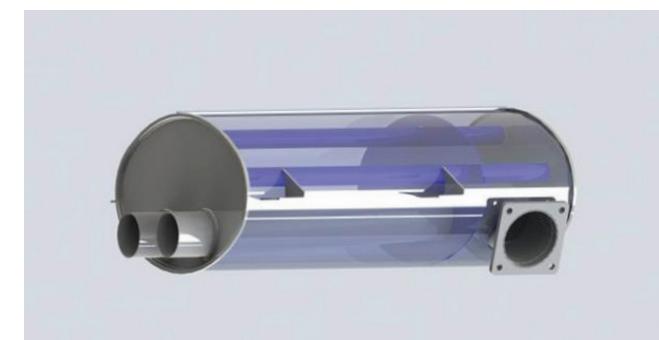

Our technology is approved world wide but specific applications may need local approval. Contact Dinex Emission Inc. for more information.

The DiCLEAN® advanced oven burn off the soot up to four times quicker than the other ovens on the market. The burning process time for a cordierite filter is only 2 hours and 15 minutes, and 2 hours and 50 minutes for a silicon carbide filter.

For many other ovens it takes up to 8-10 hours to burn off the soot from diesel particulate filters. The DiCLEAN® advanced oven makes it faster and easier for the workshop to service their customer.

*VanHool standard muffler

Insulation Techniques

Insulation techniques and solutions are mainly required in compact engine compartments and other high temperature areas where the demand for reduction in surface temperature is of utmost importance. Further, insulation of exhaust systems with emission technologies is often required to prevent unintended temperature loss ensuring optimal regeneration.

Dinex brings you a quality of insulation and insulation techniques that ensure resistance and durability even at very high temperatures. The integral insulation is always manufactured with the highest degree of reliability, easy to use and fit for purpose.

The Dinex Group uses state of the art techniques and production methods to ensure that all requirements are met with regards to product performance, durability, and cost effectiveness.

Different insulation techniques are available depending on specific requirements, durability, customer needs.

Dinex offers you:

- High temperature insulation with integral insulation for up to 1500 °F
- Insulation of exhaust systems with emission technologies
- Resistant and durable at even very high temperatures
- Dinex uses state of the art insulation techniques matching most demanding applications.
- According to customer specifications
- Supplied as complete technical solutions

*Integral insulation

Industry Standard - FlexFit Clamps

- Straight bridge piece
- Step incomplete
- Reaction block
- Restricts adjustment
- Bespoke bolts
- Larger fasteners
- Zinc plated fasteners
- No joints

Dinex Premium FlexFit Clamps

- Stepped tongue
- Formed 360° step
- Greater adjustment range
- Standard bolts
- Compact mechanism
- Fasteners can resist 700 hrs salt spray
- Clinched joints

Warranty

Warranty Coverage

Dinex Emission, Inc. will repair or renew defective parts free of charge at our own discretion provided that all terms on the stated terms and conditions have been met. Dinex will not cover any defects or failures due to misuse, alteration, modification, poor fitment or damage during storage or transport by the customer. Dinex does not cover cost of work involved in reinstalling a repair or renewal or purchase of a replacement item from an alternative source. In addition, Dinex will not be responsible for any loss of income or downtime nor any other expenses or damages due to negligence. This warranty is the only warranty made by Dinex Emission, Inc. unless other agreement has been agreed upon in writing by the parties involved.

Terms and Conditions

The warranty coverage will begin on the original date and mileage that the product is purchased by the user and will expire when the specified number of years or miles has passed. (Whichever comes first).

Notification

Dinex must be notified of any claims covered under this warranty in writing within 30 days of the date of failure. Dinex will, at its discretion, have the right to physically inspect the defective product, request relevant information from the purchaser regarding proof of purchase, mileage and actual application/use of product, or request all parts to be shipped back prepaid to Dinex.

Exhaust Product	Duration of Warranty (whichever occurs first)
Mufflers	1 yr. / 100,000 miles
Pipes - Formed / Assemblies	1 yr. / 100,000 miles
Flex Pipe / Bellows	"As is"
Accessories - Clamps, Heat shields, Adaptors, Rain caps, etc.	1 yr. / 100,000 miles
DPF, EPA07 & EPA10 Emission Products	1 yr. / 100,000 miles not including regeneration
