Truck systems within models are divided in following sequence:

- Euro IV horizontal outlet
- Euro V horizontal outlet
- Euro IV vertical outlet
- Euro V vertical outlet

The Dinex Group

The Dinex business concept is to develop, manufacture and distribute complete exhaust systems and emission technologies for all commercial vehicles and industrial machinery with diesel engines.

Dinex supplies complete exhaust systems – from turbo to tailpipe – for trucks, buses, vans and industrial machines. In addition, Dinex offers a variety of emission technology products for this range of applications.

The competences of Dinex include all processes of research, development, manufacturing, validation and distribution. Development is based on space envelope requirements, specific customer drawings, or existing designs that can be further improved with Dinex' know-how.

Dinex operates within the Original Equipment Manufacturer (OEM), Original Equipment Spare Parts Supply (OES) and Aftermarket (AEM) segments.

Dinex is Europe's leading supplier of exhaust systems and emission technologies for commercial vehicles and industrial machinery and is the only industrial player with its own manufacturing departments for metal as well as ceramic products and coating.

Organisation

Dinex is a Danish family owned company with more than 850 employees, and the head office and Emission Technology Centre are based in Denmark. The production sites are located in Denmark, Germany, Latvia, UK, Turkey, Russia, China, Thailand and USA. Sales and distribution companies are situated in Denmark, UK, Germany, France, Spain, Italy, Poland, Latvia, Russia, Turkey, Serbia, China, Thailand and USA.

Vision

The vision of the Dinex Group is to become the worlds leading manufacturer of complete exhaust and emission systems for the off-road and on-road markets for diesel engines.

This includes continuous improvement of existing filter medias in conjunction with catalytic wash coating (CDPF's) and various options for active regeneration (AR).

In addition to this, effective methods for reducing nitrogen oxides (NOx) by selective catalytic reduction (SCR) and reliable, cost effective exhaust control and monitoring systems to ensure optimal functionality, compliance and integration with On-Board-Diagnostics (OBD).

As an extension of the above, Dinex is developing combination systems, so-called SCRF where both PM - reduction (DPF) and NOx - reduction (SCR) is being dealt with in one single filter unit.

DiNOX® system

Dinex Inhouse R&D

Dinex Emission Technology department will facilitate the Dinex vision by inhouse research and development as well as cooperating with the best technology providers in the world to identify, test and validate the best available technology for future emission control to be applied for diesel engines serving the off-road and on-road market segments.

The sound pressure distribution across the inner surface of a silencer at a single frequency (f = 100 Hz).

Know-How

Product Development

More than 50 R&D employees work on developments of exhaust and emission control systems in house. This includes all stages from design, 3-D drawings, flow dynamics and testing at Dinex' Test Lab for noise, back pressure and emissions of prototype designs.

Design

Dinex uses SolidWorks - a 3D CAD system programme, which is a major advantage when communicating with customers as exchanging 3D models and drawings etc. is simplified.

2D Drawings

- Portable Document Format (PDF)
- 2D DXF/DWG (.DXF, .DWG)
- TIF image (.TIF)

3D Models/Assembly

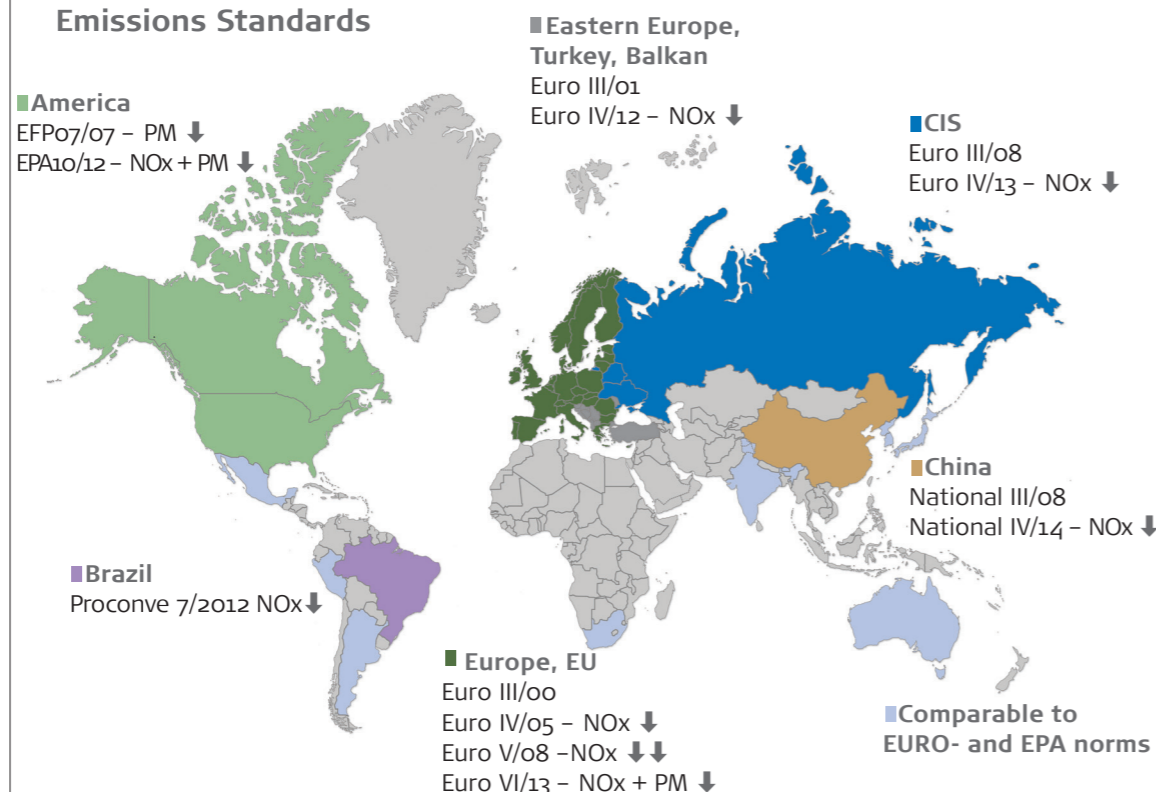

- STEP AP203/214
- Initial Graphics Exchange Specification (.IGS)
- Pro/ENGINEER files (.PRT, .ASM, .XPR, .XAS)

In the development phase different methods of calculation are applied, based on theoretical values and experience, as well as information supplied by customers, such as:

- Engine type
- Engine power
- Exhaust temperature
- Exhaust flow
- Space envelope available

Calculations are supported by a CFD analysis using a Comsol Multiphysics system programme, which verifies the design of silencers. All new designs are tested to ensure theory and real-life always matches up.

Heavy Duty Emissions Standards

Dinex Technology Centre

Test and Documentation

The in-house test centre includes a range of engine test benches making it possible to test and document silencer functionality with regards to sound attenuation and back pressure. Sound levels are measured in 1/3-octave frequency intervals from 50 Hz to 8 kHz. All tests are carried out according to Dinex standard testing methods or alternatively to customer requirements.

The test centre is used as a design tool for R&D purposes, for documentation and quality control. The state-of-art Test Centre can also hold full customer vehicles or engines and test and validate products.

Technology and R&D Centre

Dinex has installed in excess of 50,000 filter systems in Europe and gained huge experience in emission control installations. In line with the new EURO V and EURO VI regulations, Dinex has established Dinex Emission Technology Centre to ensure the required competences within the Group.

The Dinex Technology Centre enables Dinex to develop, test and validate silencers and emission technologies much faster, with greater flexibility and accuracy, and in great detail.

The benefit for our customers is an even more professional and scientific approach, resulting in a higher level of development, verification and documentation that will allow Dinex to work with customers to meet tomorrow's challenges for exhaust and emission systems, not least upcoming requirements for Euro IV & V replacement silencers.

The Dinex Technology Centre covers 1,400 m² and includes a 900 m³ - reverberant sound chamber with Brüel & Kjær measurement equipment for even more detailed analysis of noise and vibrations. In addition, the Technology Center includes two Horiba engine dyno's for engines up to 600 kW and a chassis dyno for vehicles up to 18 m and 600 kW, as well as a hot shaker bench with up to as much as 200 kg shaking capacity.

Furthermore, Dinex has installed a new flexible FTIR analyser for measuring exhaust gas and air pollution components. Size distribution and part number ultrasizing facilities are also integrated.

The Technology Centre includes facilities for development of new technologies and design, fitting, testing, vibration and verification of prototype systems. The Dinex Technology Centre is one of the most modern engine laboratories in Denmark and amongst the best in Europe.

Quality in Each Detail

Flexible Parts

Dinex uses 2S, 3S and bellow design to comply with leakage requirements

Insulation Techniques

Keeping heat inside or outside. 800 degrees inside and 250 outside

Interior Assembly

Dinex welds all internal parts minimum 50% to resist breaking.

Material Selection

Dinex uses alu-zinc or stainless steel material, depending from application, to achieve maximum lifetime for pipes and silencers.

Structural Stability

Dinex deforms inner and outer baffles to obtain a stronger construction.

Exhaust fittings

All fittings are made in-house for complete systems supply.

Clamps

A complete range of low-leakage clamps.

Pipe Bending

Dinex prefers to bend all pipes and to minimize the use of welding. Competences includes 1D-bending (1 x diameter), and zero distance between bends (bend-in-bend).

Dinex

Competitor

Exact Interior design

Dinex ensures correct interior design to guarantee best flow and hereby maximum NOx reduction.

System Compliance

Despite stringent emission reduction requirements on new trucks, there are not yet any rules or regulations for the supply of emission silencers as spare parts for Euro IV or Euro V heavy duty vehicles.

Regardless, whether a replacement emission silencers is being delivered from the vehicle manufacturer (OES) or the independent aftermarket (AEM), a verification should be mandatory, and Dinex would welcome legislative regulations of this market.

The following parameters should be considered as a minimum:

Emission compliance

An efficient coating - regardless whether it is for PM or NOx reduction is mandatory for the optimum performance and compliance with both engine calibration and given emission levels.

Back pressure

The right design of silencer and substrates ensuring the correct, low back pressure shall ensure no deterioration of the engine as well as a low fuel consumption.

Noise reduction

The sufficient noise reduction must be achieved in a given space envelope to ensure meeting all international noise standards.

Dinex tests and validates all designs of emission silencers prior to launch.

We keep all data for both Dinex and OE silencers - this includes new silencers as well as aged silencers with several hundred thousands kilometers in order to benchmark the deterioration and effect on performance over time.

Type/Model

Daily III	51
EuroCargo	57
Stralis	59
Trakker	65

Identification System IVECO

Identification

For identification the following information is required: ID-number, engine type and model designation.

ID-number

Example: ID-number IVECO

WJMAIVRLo04226783

Chassis number

Type

190E24

190 = 19 tonnes

E = EuroCargo

24 = 240 HP

Type

440S43

440 = 44 tonnes

S = Stralis

43 = 430 HP

Type

400T36

400 = 40 tonnes

T = Trakker

36 = 360 HP

Series DAILY III		System No.: 328100017

Identification System MAN

Identification

For identification the following information is required: ID-number, production unit, engine type and model designation.

ID-number

MAN
ID-number

Year of production

11/03 →
Year
Week

Engine code

Engine size
Cylinders
Power rating

Type number

DOKA - Crew cab

Example 1: MAN ID-number

WMA H70 ZZZ 3 L 034716

- WMA: Manufacturer
- H70: Type number
- ZZZ: 4-digit number
- 3: Production unit
- L: Serial no.
- 034716: 16-digit serial number

Identification System MERCEDES

Identification

For identification the following information is required: ID-number, engine type and model designation.

ID-number

MERCEDES
ID-number

Type

1835 L
Model designation
HP (35 = app. 350 HP)
App. weight in tonnes (18 tonnes)

Example 1: MERCEDE ID-number

617 003 1 5 196 865

Chassis number
Number or letter
(Letter is the latest production no.)
LHD = 1
RHD = 2
Baumuster number

Engine code

Model designation

- 1823 = Rigid vehicle
- 1823 K = Tipper
- 1823 S = Tractor
- 1823 A = 4 x 4 6 x 6 8 x 8 (all wheel drive)
- 1823 KO = Utility-vehicle
- 1823 L = Air suspension
- 1823 B = Cement mixer
- 1823 F = Fire engine
- 1823 AK = 4 x 4 6 x 6 8 x 8
- 1823 AS = 4 x 4 6 x 6 8 x 8
- 1823 AF = 4 x 4 6 x 6 8 x 8
- 1823 AB = 4 x 4 6 x 6 8 x 8
- 1823 LS = Tractor with air suspension

Example 2: MERCEDE ID-number

617 003 2 K 196 865

Chassis number
Number or letter
(Letter is the latest production no.)
LHD = 1
RHD = 2
Baumuster number

System No.: 150001027

Identification System RENAULT

Identification

For identification the following information is required: ID-number, engine type and model designation.

ID-number

ID-number and CAM marking are on a plate which can be found in the right hand side foot well of the cab.

Plate

Fabrication No.

CAM marking
02BP = February 1993

ID-number

Fabrication No.

CAM marking

Evolution of CAM marking in the time

Identification System SCANIA

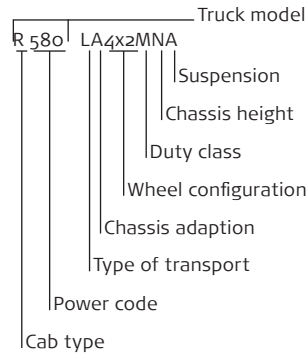

Identification

For identification the following information is required: ID-number, production unit, year of production, engine type and model designation.

ID-number

Example : SCANIA ID-number

Chassis

- A = tractor
- K = Increased ground clearance
- V = Low chassis
- W = Extra low chassis
- L = Without spec. adapt

Example: SCANIA Cab ID-number

- Cab type**
- C Cab
 - CP Low forward-control cab
 - CG Medium forward-control cab
 - CR High forward-cab

- Roof height**
- N Normal
 - L Low
 - E Low boarding step, normal roof height
 - H High
 - T Full height
- Cab length**
- 14 Short cab
 - 16 Day cab
 - 19 Sleeper cab
 - 28 Crew cab for 5-6 persons
 - 31 Long crew cab for 6-8 persons
 - 32 Extended sleeper cab

Duty class

- M = Medium duty
- H = Heavy duty
- E = Extra heavy duty

Suspension

- = Air suspension rear (A)
- = Air suspension front + rear (B)
- = Multi leaf suspension (Z)

Chassis adaptation

- A Chassis factory-adapted for tractor (Articulated)
- B Chassis factory-adapted for truck bodywork (Basic)

Type of transport

- L Long-distance haulage
- D Distribution transport
- C Construction transport

Chassis height

- E Extra low
- L Low
- N Normal
- S Semi high
- H High

Crafter 253

Identification System VW

Identification

For identification the following information is needed: ID-number, Year of production, Engine type, Model designation

ID-number

VW is identified by engine type. Information is located in the following 3 places:

- 1) Engine block
- 2) Left side in cabin by the fuse box
- 3) In the service book

In certain cases a chassis number may be needed. This is placed between front screen and the bonnet or in the front wheel arch.

Example 1: VW chassis number

W V W Z Z Z 1 J Z Y W 0 0 0 0 0 1

Production unit ex.
W=Wolfsburg
H=Hannover

Production year*

Year of production

04/2006 →

Year

Month

Engine type

BJL, 2,5 ltr. TDI

Kilowatt and HP (horse power)

100 kW, 136 HP

HP

kW

Model designation

-  van
-  crew cab
-  minibus/combi
-  van with tipper

- *
