The Dinex Group

The Dinex business concept is to develop, manufacture and distribute complete exhaust systems and emission technologies for all commercial vehicles and industrial machinery with diesel engines.

Dinex supplies complete exhaust systems – from turbo to tailpipe – for trucks, buses, vans and industrial machines. In addition, Dinex offers a variety of emission technology products for this range of applications.

The competences of Dinex include all processes of research, development, manufacturing, validation and distribution. Development is based on space envelope requirements, specific customer drawings, or existing designs that can be further improved with Dinex' know-how.

Dinex operates within the Original Equipment Manufacturer (OEM), Original Equipment Spare Parts Supply (OES) and Aftermarket segments.

Dinex is Europe's leading supplier of exhaust systems and emission technologies for commercial vehicles and industrial machinery and is the only industrial player with its own manufacturing departments for metal as well as ceramic products.

Organisation

Dinex is a Danish family owned company with more than 750 employees, and the head office and Emission Technology Centre are based in Denmark. The production sites are located in Denmark, Germany, Latvia, UK, Turkey, Russia and China. Furthermore the Dinex production site in USA will be operational from 2011. Sales and distribution companies are situated in UK, Germany, France, Spain, Italy, Poland, Latvia, Russia, Sweden, Turkey, Serbia, USA and China.

DiNOX® system

Vision

The vision of the Dinex Group is to become the world's leading manufacturer of complete exhaust and emission systems for the off- and on-road markets for diesel engines.

This includes continuous improvement of existing filter medias in conjunction with catalytic wash coating (CDPF's) and various options for active regeneration (AR).

In addition to this, effective methods for reducing nitrogen oxides (NOx) by selective catalytic reduction (SCR) and reliable, cost effective exhaust control and monitoring systems to ensure optimal functionality and compliance.

Dinex Inhouse R&D

Dinex Emission Technology department will facilitate the Dinex vision by inhouse development as well as cooperating with the best technology providers in the world to identify, test and validate the best available technology for future emission control to be applied for diesel engines serving the on-road and off-road market segments.

Know-How

The sound pressure distribution across the inner surface of a silencer at a single frequency ($f = 100$ Hz).

Product Development

More than 50 R&D employees work on developments of exhaust and emission control systems in house. This includes all stages from design, 3-D drawings, flow dynamics and testing at Dinex' Test Lab for noise, back pressure and prototype designs.

Design

Dinex uses SolidWorks - a 3D CAD system programme, which is a major advantage when communicating with customers as exchanging 3D models and drawings etc. is simplified.

2D Drawings

- Portable Document Format (PDF)
- 2D DXF/DWG (.DXF, .DWG)
- TIF image (.TIF)

3D Models/Assembly

- STEP AP203/214
- Initial Graphics Exchange Specification (.IGS)
- Pro/ENGINEER files (.PRT, .ASM, .XPR, .XAS)

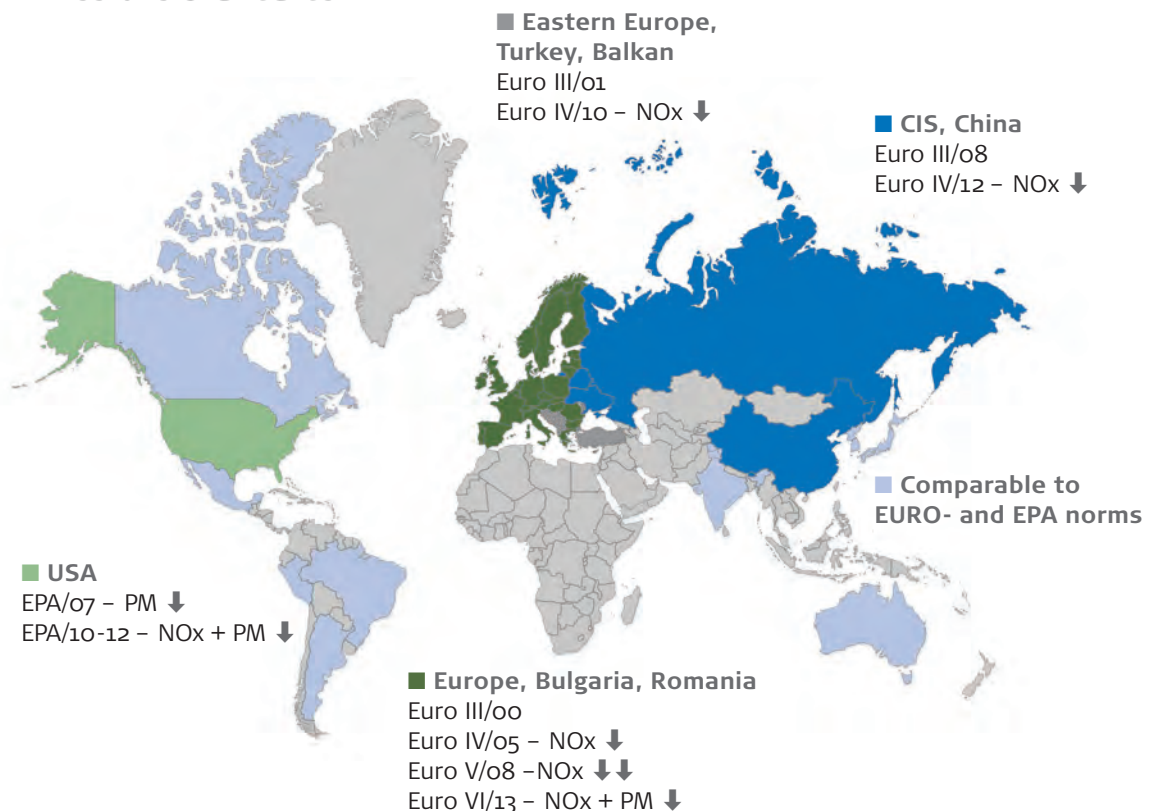

In the development phase different methods of calculation are applied, based on theoretical values and experience, as well as information supplied by customers.

Information from customers includes:

- Engine type
- Engine power
- Exhaust temperature
- Exhaust flow
- Space envelope available

Calculations are supported by a CFD analysis using a Comsol Multiphysics system programme, which verifies the design of silencers. All new designs are tested.

Heavy Duty Emissions Standards

Dinex Technology Centre
established 2007.

Test and Documentation

The in-house test centre includes a range of engine test benches making it possible to test and document silencer functionality with regards to sound attenuation and back pressure. Sound levels are measured in 1/3-octave frequency intervals from 50 Hz to 8 kHz. All tests are carried out according to Dinex standard testing methods or alternatively to customer requirements.

The test centre is used as a design tool for R&D purposes, for documentation and quality control. The new test centre can also take the customer's vehicle or engine and test and validate products.

Technology and New R&D Centre

Dinex has installed in excess of 30,000 filter systems in Europe and gained huge experience in emission control installations. In line with the new EURO V and EURO VI regulations, Dinex has established Dinex Emission Technology A/S to ensure the required competences within the Group.

The new Dinex Technology Centre enables Dinex to develop, test and validate silencers and emission technologies much faster, with greater flexibility and accuracy, and in great detail.

The benefit for our customers is an even more professional and scientific approach, resulting in a higher level of development, verification and documentation that will allow Dinex to work with customers to meet tomorrow's challenges for exhaust and emission systems.

The Dinex Technology Centre covers 1,400 m² and includes a new - 900 m³ - reverberant sound chamber with Brüel & Kjær measurement equipment for even more detailed analysis of noise and vibrations. In addition, the technology centre includes two new Horiba engine dyno's for engines up to 600 kW and a chassis dyno for vehicles up to 18 m and 600 kW.

Furthermore, Dinex has invested in a new flexible FTIR analyser for measuring exhaust gas and air pollution components. Size distribution and particle number ultrasizing facilities will also be integrated.

The Technology Centre includes facilities for development of new technologies and design, fitting, testing, vibration and verification of prototype systems. The Dinex Technology Centre is one of the most modern engine laboratories in Denmark and amongst the best in Europe.

Quality Planning in Design Stage

Competitor Dinex

Structural Stability

Dinex deforms inner and outer baffles to obtain a stronger construction.

Material Selection

Dinex uses alu-zinc silencer bodies (which is 5 times stronger than aluminized silencer bodies) and endplates to improve corrosion resistance.

Material

Dinex uses predominantly 1.5-2.0 mm pipe thickness against competing manufacturers who use 1.0-1.5 mm thickness.

Flexible Parts

Dinex uses in- and outside pipe attachment to support the flex pipe and prevent breakage.

Pipe Bending

Dinex prefers to bend all pipes and to minimize the use of welding. Competences includes minimal bending radius (1 x diameter), and low to zero distance between bends (compound bending).

Dinex

Competitor

Interior Assembly

Dinex welds all internal parts minimum 50% to resist breaking.

Exterior Assembly

Dinex lock seams 99% of all silencers produced, and uses single pipe from inlet through to outlet, to withstand vibrations.

Dinex

Competitor

Extended Lifetime & Superior Performance

Dinex

Competitor

Unique Clamps

Dinex inhouse produced clamps as well as the high quality body straps ensure gas tight systems with a good fit to any vehicle. Modularity and easy assembly is guaranteed and the clinching proces ensures superior durability compared to spot-welding.

Flow

Superior pipe bending capabilities is the reason why weldings are a rare sight on a Dinex pipe. This ensures the most optimal flow of exhaust gas through the pipe, more efficient noise reduction, and better resistance to corrosion.

Dinex

Competitor

Dinex lock seaming

Competitor welding

Dinex

Competitor

System Design

Dinex uses lock seaming technique to assemble 99% of all silencers - circular, oval, square, conical and other odd-shaped types no exception. Avoiding exterior weldings provides a far better corrosion resistance, higher mechanical strength, and a more aesthetic finish.

Interior Design

Silencers are designed with optimum flow and noise reduction in mind. The design analysis also considers the long life time requirement and vibration resistance of the unit. Interior assemblies are always welded at least 50% as opposed to competitors product which is only spot-welded, and therefore more often loose inner parts as a result of vibrations.

Sound attenuation is the ratio between the radiated sound power level of the exhaust system, with and without the silencer installed. An overall sound attenuation of 10 dB will by a human ear be perceived as halving of the noise level.

Identification System IVECO

Identification

For identification the following information is required: ID-number, production unit, engine type and model designation

ID-number

Type

- 190E24**
- 190 = 19 tonnes
- E = EuroTech
- 24 = 240 HP

Example: ID-number IVECO

WJMAIVRL00 4226783

Chassis number

Type

- 440S43**
- 440 = 44 tonnes
- S = Stralis
- 43 = 430 HP

Identification System MERCEDES

Identification

For identification the following information is required: ID-number, engine type and model designation

ID-number

MERCEDES
ID-number

Example 1: MERCEDES ID-number

617 003 1 5 196 865

Chassis number

Number or letter
(Letter is the latest production no.)

LHD = 1
RHD = 2

Baumuster number

Engine code

Type

1831 L

Model designation

HP (31 = app. 310 HP)

App. weight in tonnes (18 tonnes)

Model designation

- 1823 = Rigid vehicle
- 1823 K = Tipper
- 1823 S = Tractor
- 1823 A = 4 x 4 6 x 6 8 x 8
- 1823 KO = Utility-vehicle
- 1823 L = Air suspension
- 1823 B = Cement mixer
- 1823 F = Fire engine
- 1823 AK = 4 x 4 6 x 6 8 x 8
- 1823 AS = 4 x 4 6 x 6 8 x 8
- 1823 AF = 4 x 4 6 x 6 8 x 8
- 1823 AB = 4 x 4 6 x 6 8 x 8
- 1823 LS = Tractor with air suspension

Example 2: MERCEDES ID-number

617 003 2 K 196 865

Chassis number

Number or letter
(Letter is the latest production no.)

LHD = 1
RHD = 2

Baumuster number

Identification System RENAULT

Identification

For identification the following information is required:
ID-number, engine type and model designation

ID-number

ID-number and CAM marking are on a plate which can be found in the right hand side foot well of the cab.

Plate

CAM marking
02BP = February 1993

ID-number

Fabrication No.

CAM marking

Evolution of CAM marking in the time

P, R, T Series	336

Identification System SCANIA

Identification

For identification the following information is required: ID-number, production unit, year of production, engine type and model designation

ID-number

Type

- G = Low cab
Low boarding height
- P = Low cab
Ord. boarding height
- R = High cabin
- T = Bonneted cabin
- Cx-13 = Day cab
- Cx-19 = Sleeper cab

Model

- M = Medium duty
- H = Heavy duty
- E = Extra heavy duty

Production unit

- SSS = Sweden (S)
- SNL = Netherlands (NL)
- SAN = Argentina (RA)
- SLA = Latin America

Transmission

- G xxx = Manuel
- GS xxx = Manuel + split
- GR xxx = Manuel + range
- GRS xxx = Manuel + range + spilt
- GRE xxx = Manuel + range + power take off
- GA xxx = Automatic
- GAE xxx = Automatic + power take off
- GH xxx = Manuel + converter
- GRH xxx = Manuel + range + converter
- G xxx - T = Incl. retarder
- CAG xxx = Computer assisted

Chassis

-  A = Tractor
-  K = Increased ground clearance
-  V = Low chassis
-  W = Extra low chassis
-  L = Without spec. adapt

Suspension

-  = Air suspension rear
-  = Air suspension front + rear
-  = Parabolic springs
-  = Multi leaf suspension

Engine

- DN xxx = Ordinary absorption engine
- DS xxx = Turbo
- DSI xxx = Turbo/intercooler (Water cooled)
- DSC xxx = Turbo/intercooler (Air cooled)
- DTC xxx = Turbo/intercooler + Turbo compound
