

We've teamed up with DPF Alternatives to offer a Remanufactured DOC program!

going the extra mile

Your Partner in Exhaust and Emission

At Dinex Emission, we believe in setting new standards for excellence. That's why we're proud to announce our groundbreaking collaboration with DPF Alternatives to introduce the Remanufactured Diesel Oxidation Catalyst (DOC) program. This program represents a leap forward in emission control technology, offering unparalleled quality and performance.

What does 'remanufactured' mean?

Remanufacturing enhances parts beyond their original performance by aligning them with factory specifications while also allowing for design improvements. This ensures high-quality, reliable parts that often exceed the performance of new ones. Our stringent standards guarantee that remanufactured parts operate as well as new ones, with durability and reliability to match or surpass the original.

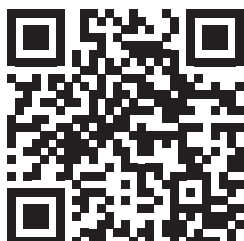

Comprehensive Coverage

We're thrilled to announce this program will cover the complete range of DOCs - including EPA17 solutions. Whether you prioritize performance or compliance, our Reman DOC program has you covered. Say goodbye to compromise and hello to peace of mind.

Join the Movement

Join us in moving toward a greener future with our new Reman DOC Program. By choosing our innovative solution, you're not just investing in superior emission control technology - you're joining a community dedicated to environmental sustainability and cutting-edge engineering. Experience the difference today and be a part of shaping tomorrow's cleaner world.

Customer Assurance

With Dinex Emission and DPF Alternatives, you can trust that every part meets the highest quality standards. Scan the QR code to find a DPF Alternatives location near you!
